Report on Business

1. Provide a general overview and discussion of the development of the Issuer’s business and operations over the previous month. Where the Issuer was inactive disclose this fact.
 - AJN continued to review projects and assets located in the Democratic Republic of the Congo (DRC).
 - AJN continued its legal and technical due diligence on exploration permit PR 15623 which is highly prospective for lithium, tin and tantalum. On October 15, 2023, AJN entered into a binding term sheet with Mining Entreprise Katanga SARLU (MEK), pursuant to which AJN can acquire up to a 75% indirect interest in exploration permit PR 15623.
 - AJN continued percussion drilling on exploration permit PR 15282 with a Percussion drill rig commissioned from MB Exploration. To date 1,176m have been drilled. The programme has successfully delineated basement granites with low prospectivity and has identified areas of potential interest where recoveries were hampered by excessive ground water. These areas will be followed up with diamond drilling which is expected to commence during the month. An RC and Diamond drill rig are expected to arrive at Manono in early May. Both rigs are under contract to Hub Drilling of South Africa and will potentially replace the percussion drill rig which up to now was unable to penetrate prospective areas with excessive ground water. The percussing and RC drilling is aimed at identifying the continuation of the Manono pegmatites onto the project area. AJN has completed its legal and financial due diligence and will make a decision to continue exploring on permit PR 15282 once results have been reported for the current and forthcoming drilling programmes. On May 30, 2023, AJN signed a binding term sheet with Palm Constellation SARL, pursuant to which AJN can acquire up to a 70% indirect interest in exploration permit PR 15282.
 - AJN has contracted a diamond drill rig from Hub Drilling which will mobilize to PR 15383 at the Kabunda Project once it has completed 3 planned diamond drill holes on PR 15282.. Two priority zones have been identified from pitting and additional mapping and sampling. The northern zone has a strike length of circa 1.5km in which widths of host pegmatites vary from 150m to 50m while the second zone has a number of parallel pegmatite units over 200m over a potential strike length of 1km. Legal and tenure due diligence is ongoing. On December 30, 2022, AJN signed a binding term sheet with MEK pursuant to which it can acquire a 75% interest in exploration permit PR 15383, which is prospective for lithium, tin

and tantalum.

- AJN management has had meetings and discussions with various parties with respect to the memorandum of understanding (MOU) which AJN announced on February 8, 2022 and which was endorsed by the DRC State as announced on April 19, 2022 and additional projects in the DRC.

- AJN is waiting on timing of when it can do additional work on its Salts Wells lithium project in Nevada and is currently waiting on drill rig availability. Due to the small size of the program, AJN has found it challenging to secure a drilling company that is willing to take on the work.

2. Provide a general overview and discussion of the activities of management.
